

The claim # 1:

1. An array device comprising:
 - a substrate having a surface;
 - one or more binding molecules on said substrate surface; and
 - one or more instigators, said one or more each comprising (a) a compliment to one ore more of said binding molecules and (b) a protein-binding moiety, said protein-binding moiety is specific for a protein.

Is amended to:

1. An array device comprising:
 - a substrate having a surface;
 - one or more binding molecules on said substrate surface; and
 - one or more instigators, said one or more each comprising (a) a single stranded DNA or RNA or PNA or polypeptides compliment to one or more of said binding molecules and (b) a protein-binding moiety, said protein-binding moiety is specific for a protein.

Definitions:

The term DNA is deoxyribonucleic acid ;

The term RNA is ribonucleic acid;

The term PNA is Peptide Nucleic Acid.
